

St Aloysius Power Maths White Rose Edition calculation policy

St Aloysius RC Primary School

Power Maths White Rose Edition calculation policy, UPPER KS2

KEY STAGE 2

In upper Key Stage 2, children build on secure foundations in calculation, and develop fluency, accuracy and flexibility in their approach to the four operations. They work with whole numbers and adapt their skills to work with decimals, and they continue to develop their ability to select appropriate, accurate and efficient operations.

Key language: decimal, column methods, exchange, partition, mental method, ten thousand, hundred thousand, million, factor, multiple, prime number, square number, cube number

Addition and subtraction: Children build on their column methods to add and subtract numbers with up to seven digits, and they adapt the methods to calculate efficiently and effectively with decimals, ensuring understanding of place value at every stage.

Children compare and contrast methods, and they select mental methods or jottings where appropriate and where these are more likely to be efficient or accurate when compared with formal column methods.

Bar models are used to represent the calculations required to solve problems and may indicate where efficient methods can be chosen.

Multiplication and division: Building on their understanding, children develop methods to multiply up to 4-digit numbers by single-digit and 2-digit numbers.

Children develop column methods with an understanding of place value, and they continue to use the key skill of unitising to multiply and divide by 10, 100 and 1,000.

Written division methods are introduced and adapted for division by single-digit and 2-digit numbers and are understood alongside the area model and place value. In Year 6, children develop a secure understanding of how division is related to fractions.

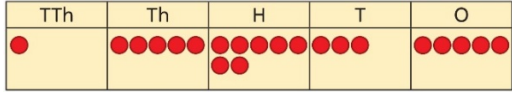

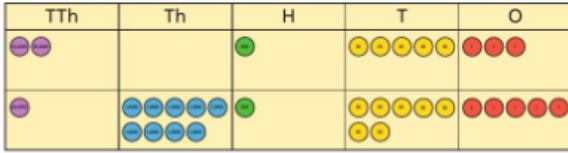

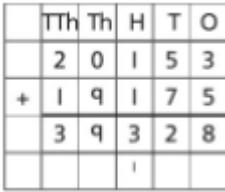

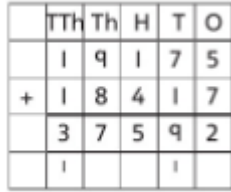

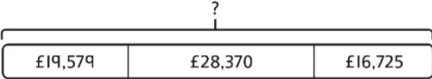

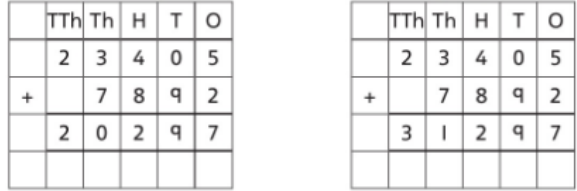

Multiplication and division of decimals are also introduced and refined in Year 6.

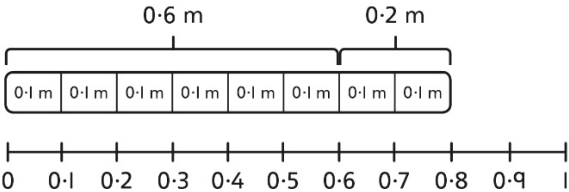

Fractions: Children find fractions of amounts, multiply a fraction by a whole number and by another fraction, divide a fraction by a whole number, and add and subtract fractions with different denominators. Children become more confident working with improper fractions and mixed numbers and can calculate with them.

Understanding of decimals with up to 3 decimal places is built through place value and as fractions, and children calculate with decimals in the context of measure as well as in pure arithmetic.

Children develop an understanding of percentages in relation to hundredths, and they understand how to work with common percentages: 50%, 25%, 10% and 1%.

Year 5 Subtraction

Column subtraction with whole numbers

Use place value equipment to understand where exchanges are required.

$$2,250 - 1,070 = ?$$

Represent the stages of the calculation using place value equipment on a grid alongside the calculation, including exchanges where required.

$$15,735 - 2,582 = 13,153$$

Use column subtraction methods with exchange where required.

Now subtract the 10s.
Exchange 1 hundred for 10 tens.

Subtract the 100s, 1,000s and 10,000s.

<p>Subtracting decimals</p>	<p>Explore complements to a whole number by working in the context of length.</p> <p></p> <p>1 m - <input type="text"/> m = <input type="text"/> m</p> <p>$1 - 0.49 = ?$</p>	<p>Use a place value grid to represent the stages of column subtraction, including exchanges where required.</p> <p>$5.74 - 2.25 = ?$</p> <p></p> <p>Exchange 1 tenth for 10 hundredths.</p> <p></p> <p>Now subtract the 5 hundredths.</p> <p></p> <p>Now subtract the 2 tenths, then the 2 ones.</p> <p></p> <p></p>	<p>Use column subtraction, with an understanding of place value, including subtracting numbers with different numbers of decimal places.</p> <p>$2.000 - 0.296 = ?$</p> <p></p>
<p>Year 5 Multiplication</p>			
<p>Understanding factors</p>	<p>Use cubes or counters to explore the meaning of 'square numbers'.</p>	<p>Use images to explore examples and non-examples of square numbers.</p>	<p>Understand the pattern of square numbers in the multiplication tables.</p>

25 is a square number because it is made from 5 rows of 5.

Use cubes to explore cube numbers.

8 is a cube number.

$$8 \times 8 = 64$$

$$8^2 = 64$$

12 is not a square number, because you cannot multiply a whole number by itself to make 12.

Use a multiplication grid to circle each square number. Can children spot a pattern?

Multiplying by 10, 100 and 1,000

Use place value equipment to multiply by 10, 100 and 1,000 by unitising.

$4 \times 1 = 4 \text{ ones} = 4$	
$4 \times 10 = 4 \text{ tens} = 40$	
$4 \times 100 = 4 \text{ hundreds} = 400$	

Understand the effect of repeated multiplication by 10.

$$7 \times 10 = 70$$

$$7 \times 100 = 7,000$$

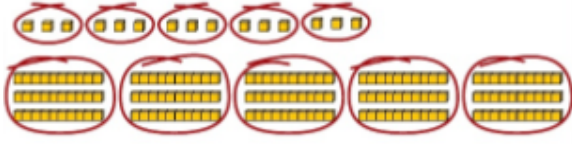

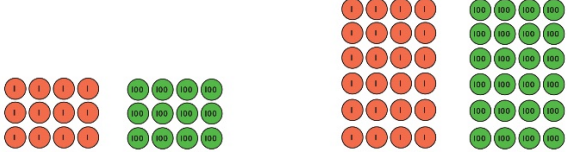

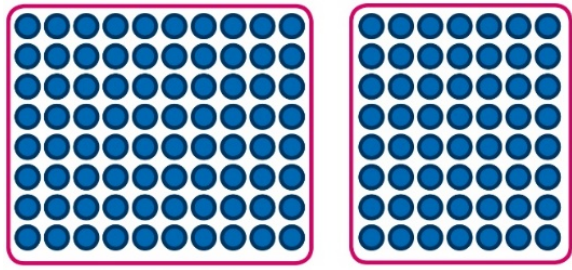

Understand how exchange relates to the digits when multiplying by 10, 100 and 1,000.

$$17 \times 10 = 170$$

$$17 \times 100 = 17 \times 10 \times 10 = 1,700$$

$$17 \times 1,000 = 17 \times 10 \times 10 \times 10 = 17,000$$

<p>Multiplying by multiples of 10, 100 and 1,000</p>	<p>Use place value equipment to explore multiplying by unitising.</p>  <p>5 groups of 3 ones is 15 ones. 5 groups of 3 tens is 15 tens.</p> <p>So, I know that 5 groups of 3 thousands would be 15 thousands.</p>	<p>$7 \times 1,000 = 70,000$</p> <p>Use place value equipment to represent how to multiply by multiples of 10, 100 and 1,000.</p>  <p>$4 \times 3 = 12$ $6 \times 4 = 24$ $4 \times 300 = 1,200$ $6 \times 400 = 2,400$</p>	<p>Use known facts and unitising to multiply.</p> <p>$5 \times 4 = 20$ $5 \times 40 = 200$ $5 \times 400 = 2,000$ $5 \times 4,000 = 20,000$</p> <p>$5,000 \times 4 = 20,000$</p>

Use bar model and number line representations to model addition in problem-solving and measure contexts.

Which method has been completed accurately?

What mistake has been made?

Column methods are also used for decimal additions where mental methods are not efficient.

Selecting mental methods for larger numbers where appropriate

Represent 7-digit numbers on a place value grid and use this to support thinking and mental methods.

M	HTh	TTh	Th	H	T	O
●●	●●●●	●	●	●●		●

$$2,411,301 + 500,000 = ?$$

This would be 5 more counters in the HTh place.

So, the total is 2,911,301.

$$2,411,301 + 500,000 = 2,911,301$$

Use a bar model to support thinking in addition problems.

$$257,000 + 99,000 = ?$$

I added 100 thousands then subtracted 1 thousand.

257 thousands + 100 thousands = 357 thousands

$$257,000 + 100,000 = 357,000$$

$$357,000 - 1,000 = 356,000$$

Use place value and unitising to support mental calculations with larger numbers.

$$195,000 + 6,000 = ?$$

$$195 + 5 + 1 = 201$$

195 thousands + 6 thousands = 201 thousands

So, 195,000 + 6,000 = 201,000

So, $257,000 + 99,000 = 356,000$

Understanding order of operations in calculations

Use equipment to model different interpretations of a calculation with more than one operation. Explore different results.

$3 \times 5 - 2 = ?$

$3 \times (5 - 2)$
 $\downarrow \quad \downarrow$
 $3 \times 3 = 9$

$(3 \times 5) - 2$
 $\downarrow \quad \downarrow$
 $15 - 2 = 13$

Model calculations using a bar model to demonstrate the correct order of operations in multi-step calculations.

This can be written as: $16 \times 4 + 16 \times 6$
 $64 + 96 = 160$

Understand the correct order of operations in calculations without brackets.

Understand how brackets affect the order of operations in a calculation.

$4 + 6 \times 16$
 $4 + 96 = 100$

$(4 + 6) \times 16$
 $10 \times 16 = 160$
